Our commitment to the environment embraces:

Our range of products, services and solutions are specifically designed to improve hygiene within commercial and household surroundings without compromising the environment for future generations. We are dedicated to the prevention of pollution and the continual improvement of the environment, as evidenced by our ISO 14001 certification.

Compliance

Complying with all applicable legislative requirements and 'other' requirements.

Service

Evaluating all aspects of our business to ensure that we constantly provide the best service to our customers whilst reducing the impacts on the environment.

Communication

Communicating our policy clearly to our employees, customers and supply partners.

Development

Applying best practice & adopting a leading stance in the development of a greener service and product supply chain.

Technology

Supporting the use of environmentally responsible materials and technologies by promoting the use of renewable and sustainable resources – ensuring products are recycled or disposed of in the most environmentally friendly way.

Transport

Use of the most environmentally friendly transport where possible that meet the latest European low emission standards.

Logistics

A commitment to service logistics; re-scheduling and reducing the miles driven without compromising our professional services.

Recycling

Minimising the use of printed materials and the greater use of recycled paper and electronic processes.

Mission Statement

Hygienic Concepts was established in 2004 with a core belief in prioritizing client satisfaction above all else. Our unwavering commitment to this principle has enabled us to expand our reach and serve various counties across the United Kingdom, with our headquarters based in the Midlands.

At Hygienic Concepts, we place a great emphasis on environmental responsibility and aim to contribute towards a sustainable future by sourcing our products locally and recycling them when disposing. By constantly innovating and improving our offerings, we have not only been able to reduce our carbon footprint but also provide cost savings to our clients through reduced water expenses.

What happens to our waste?

At our company, we understand the importance of responsible waste management, and we have made it our mission to ensure that all our waste is disposed of in an eco-friendly and sustainable way. We use recycling and composting facilities to minimize our carbon footprint and reduce the amount of waste that goes into landfills. By adopting sustainable waste management practices, we are able to contribute towards a cleaner and greener environment while also setting a positive example for other businesses to follow.

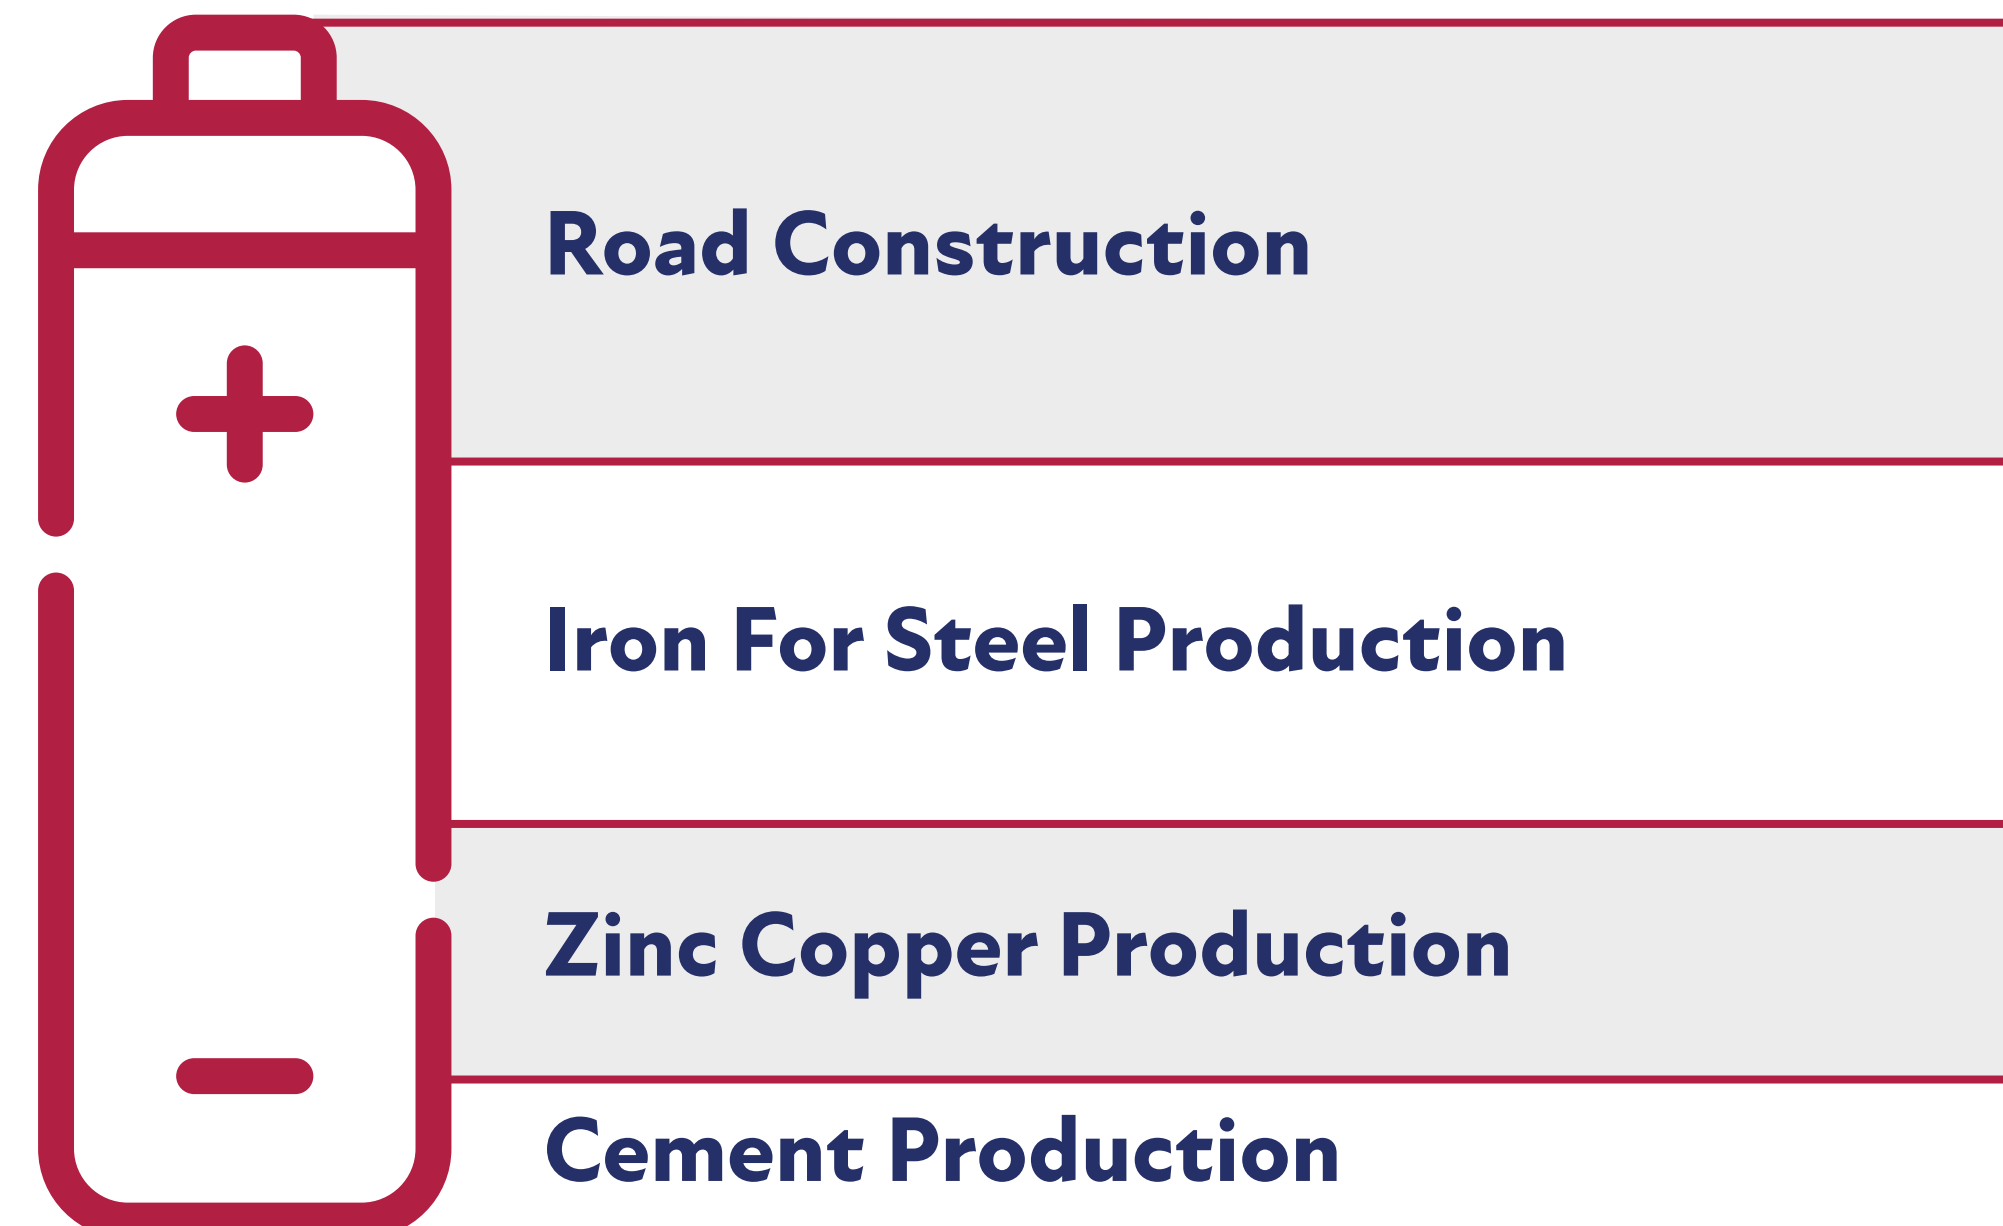

Metal

Batteries used within our units are collated at our depots and sent for recycling. Batteries are stripped down for reusable elements such as zinc, steel and manganese. After recycling these elements are used within industrial applications and the steel industry.

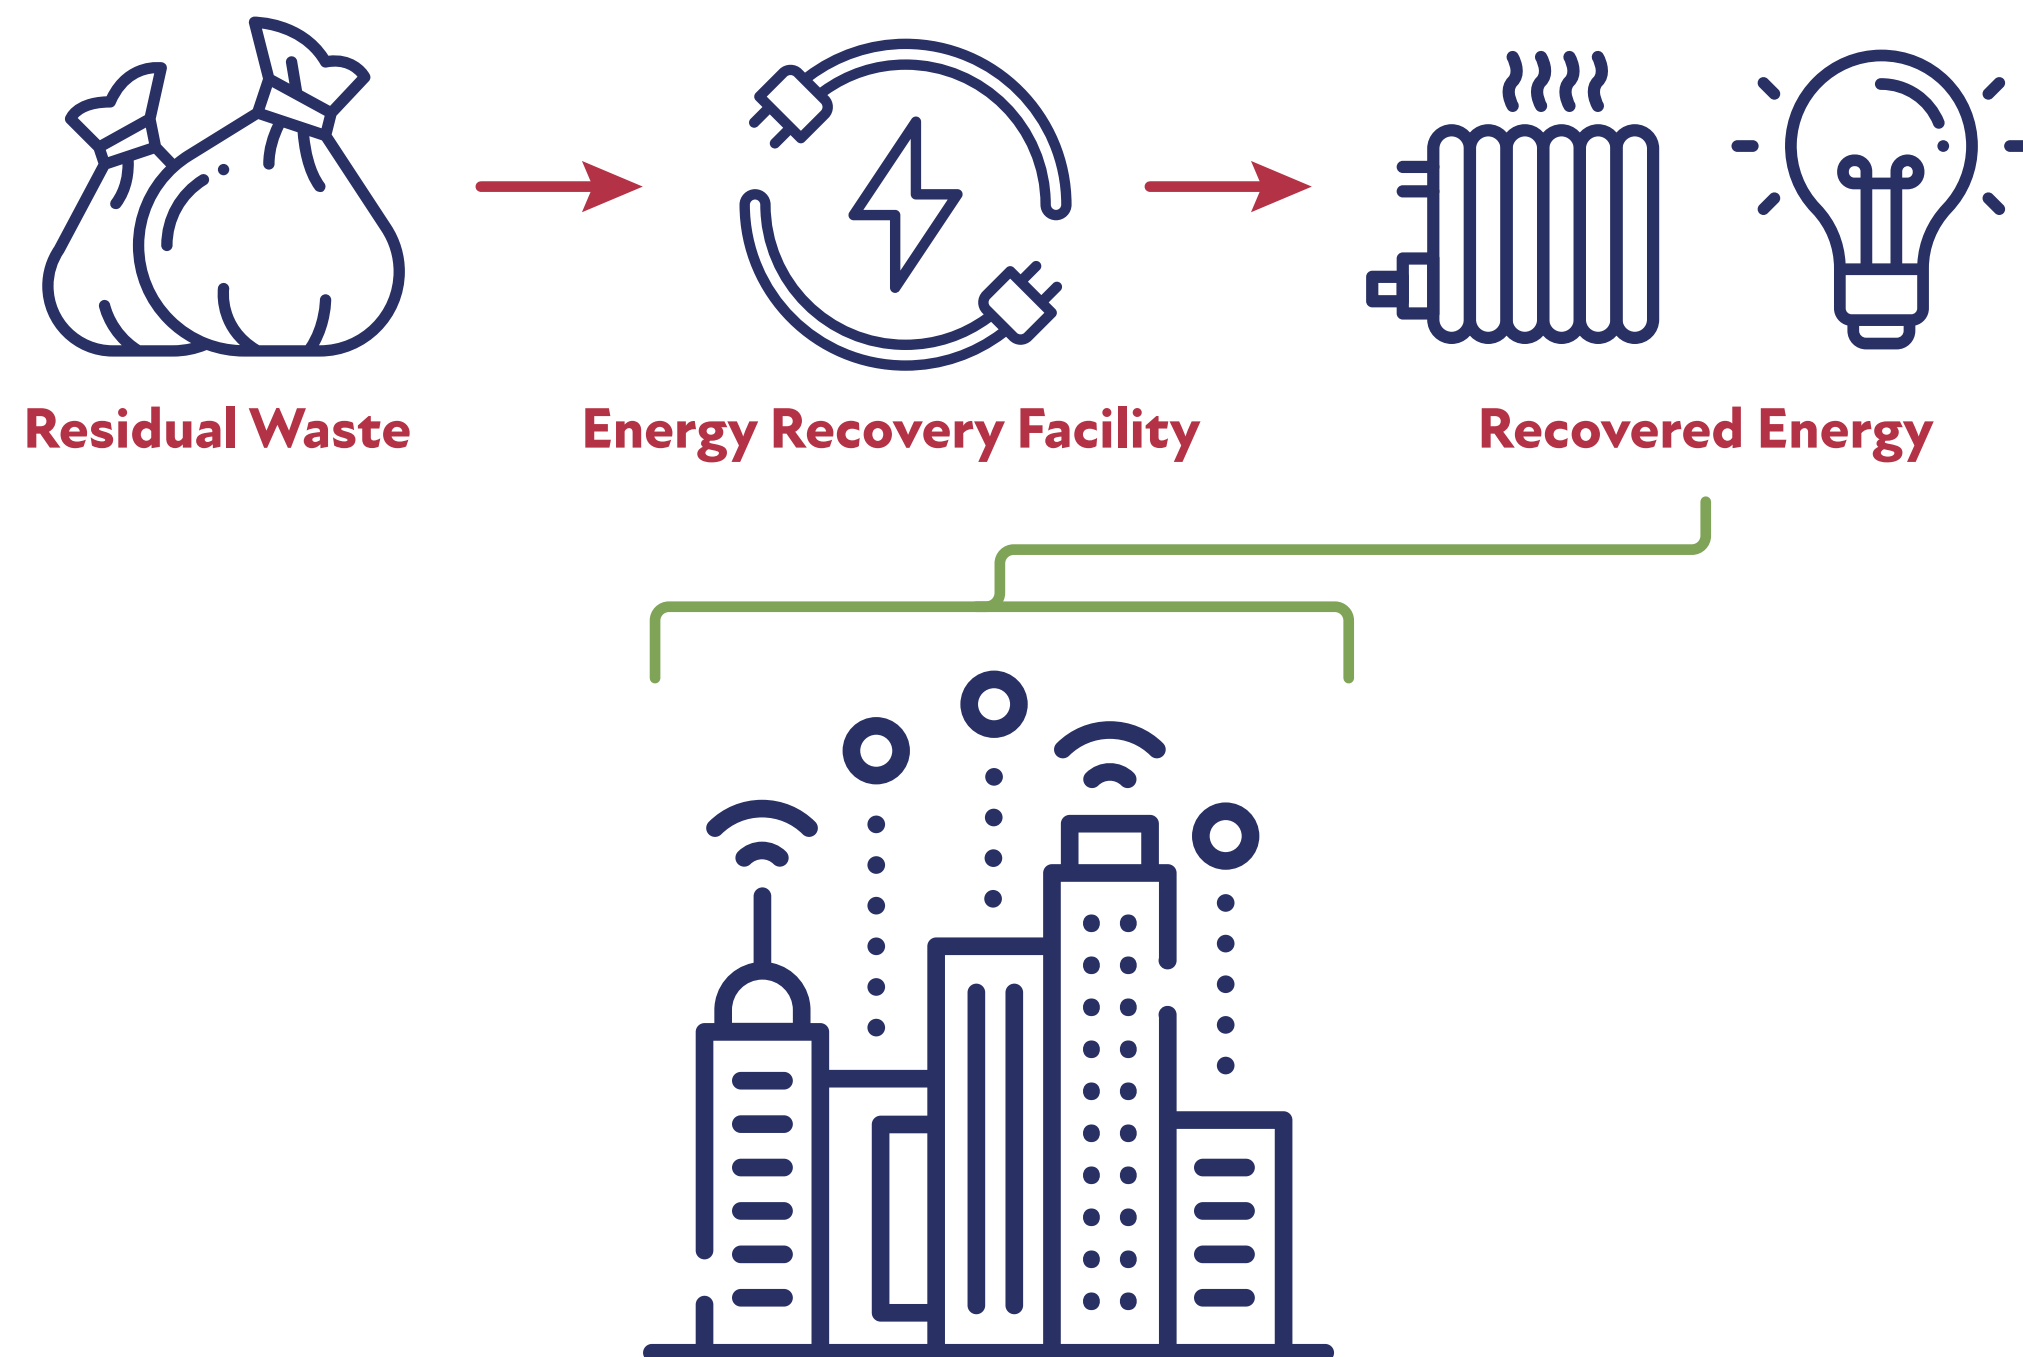

Batteries

Batteries used within our units are collated at our depots and sent for recycling. Batteries are stripped down for reusable elements such as zinc, steel and manganese. After recycling these elements are used within industrial applications and the steel industry.

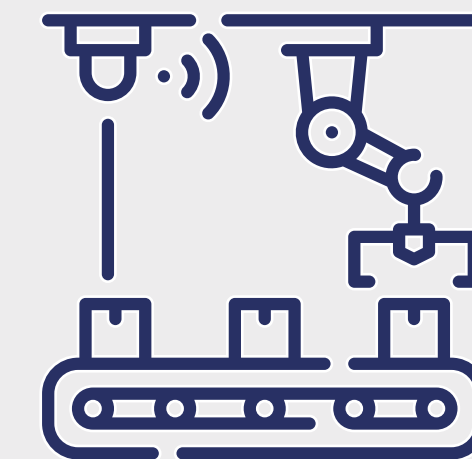

General

Non-recyclable refuse is sent either to an Energy Recovery Facility or to produce Refuse Derived Fuel. The waste is turned into energy to power homes and businesses achieving virtually zero landfill.

Recycling

Material Recovery Facility

Cardboard and paper materials are separated mechanically.

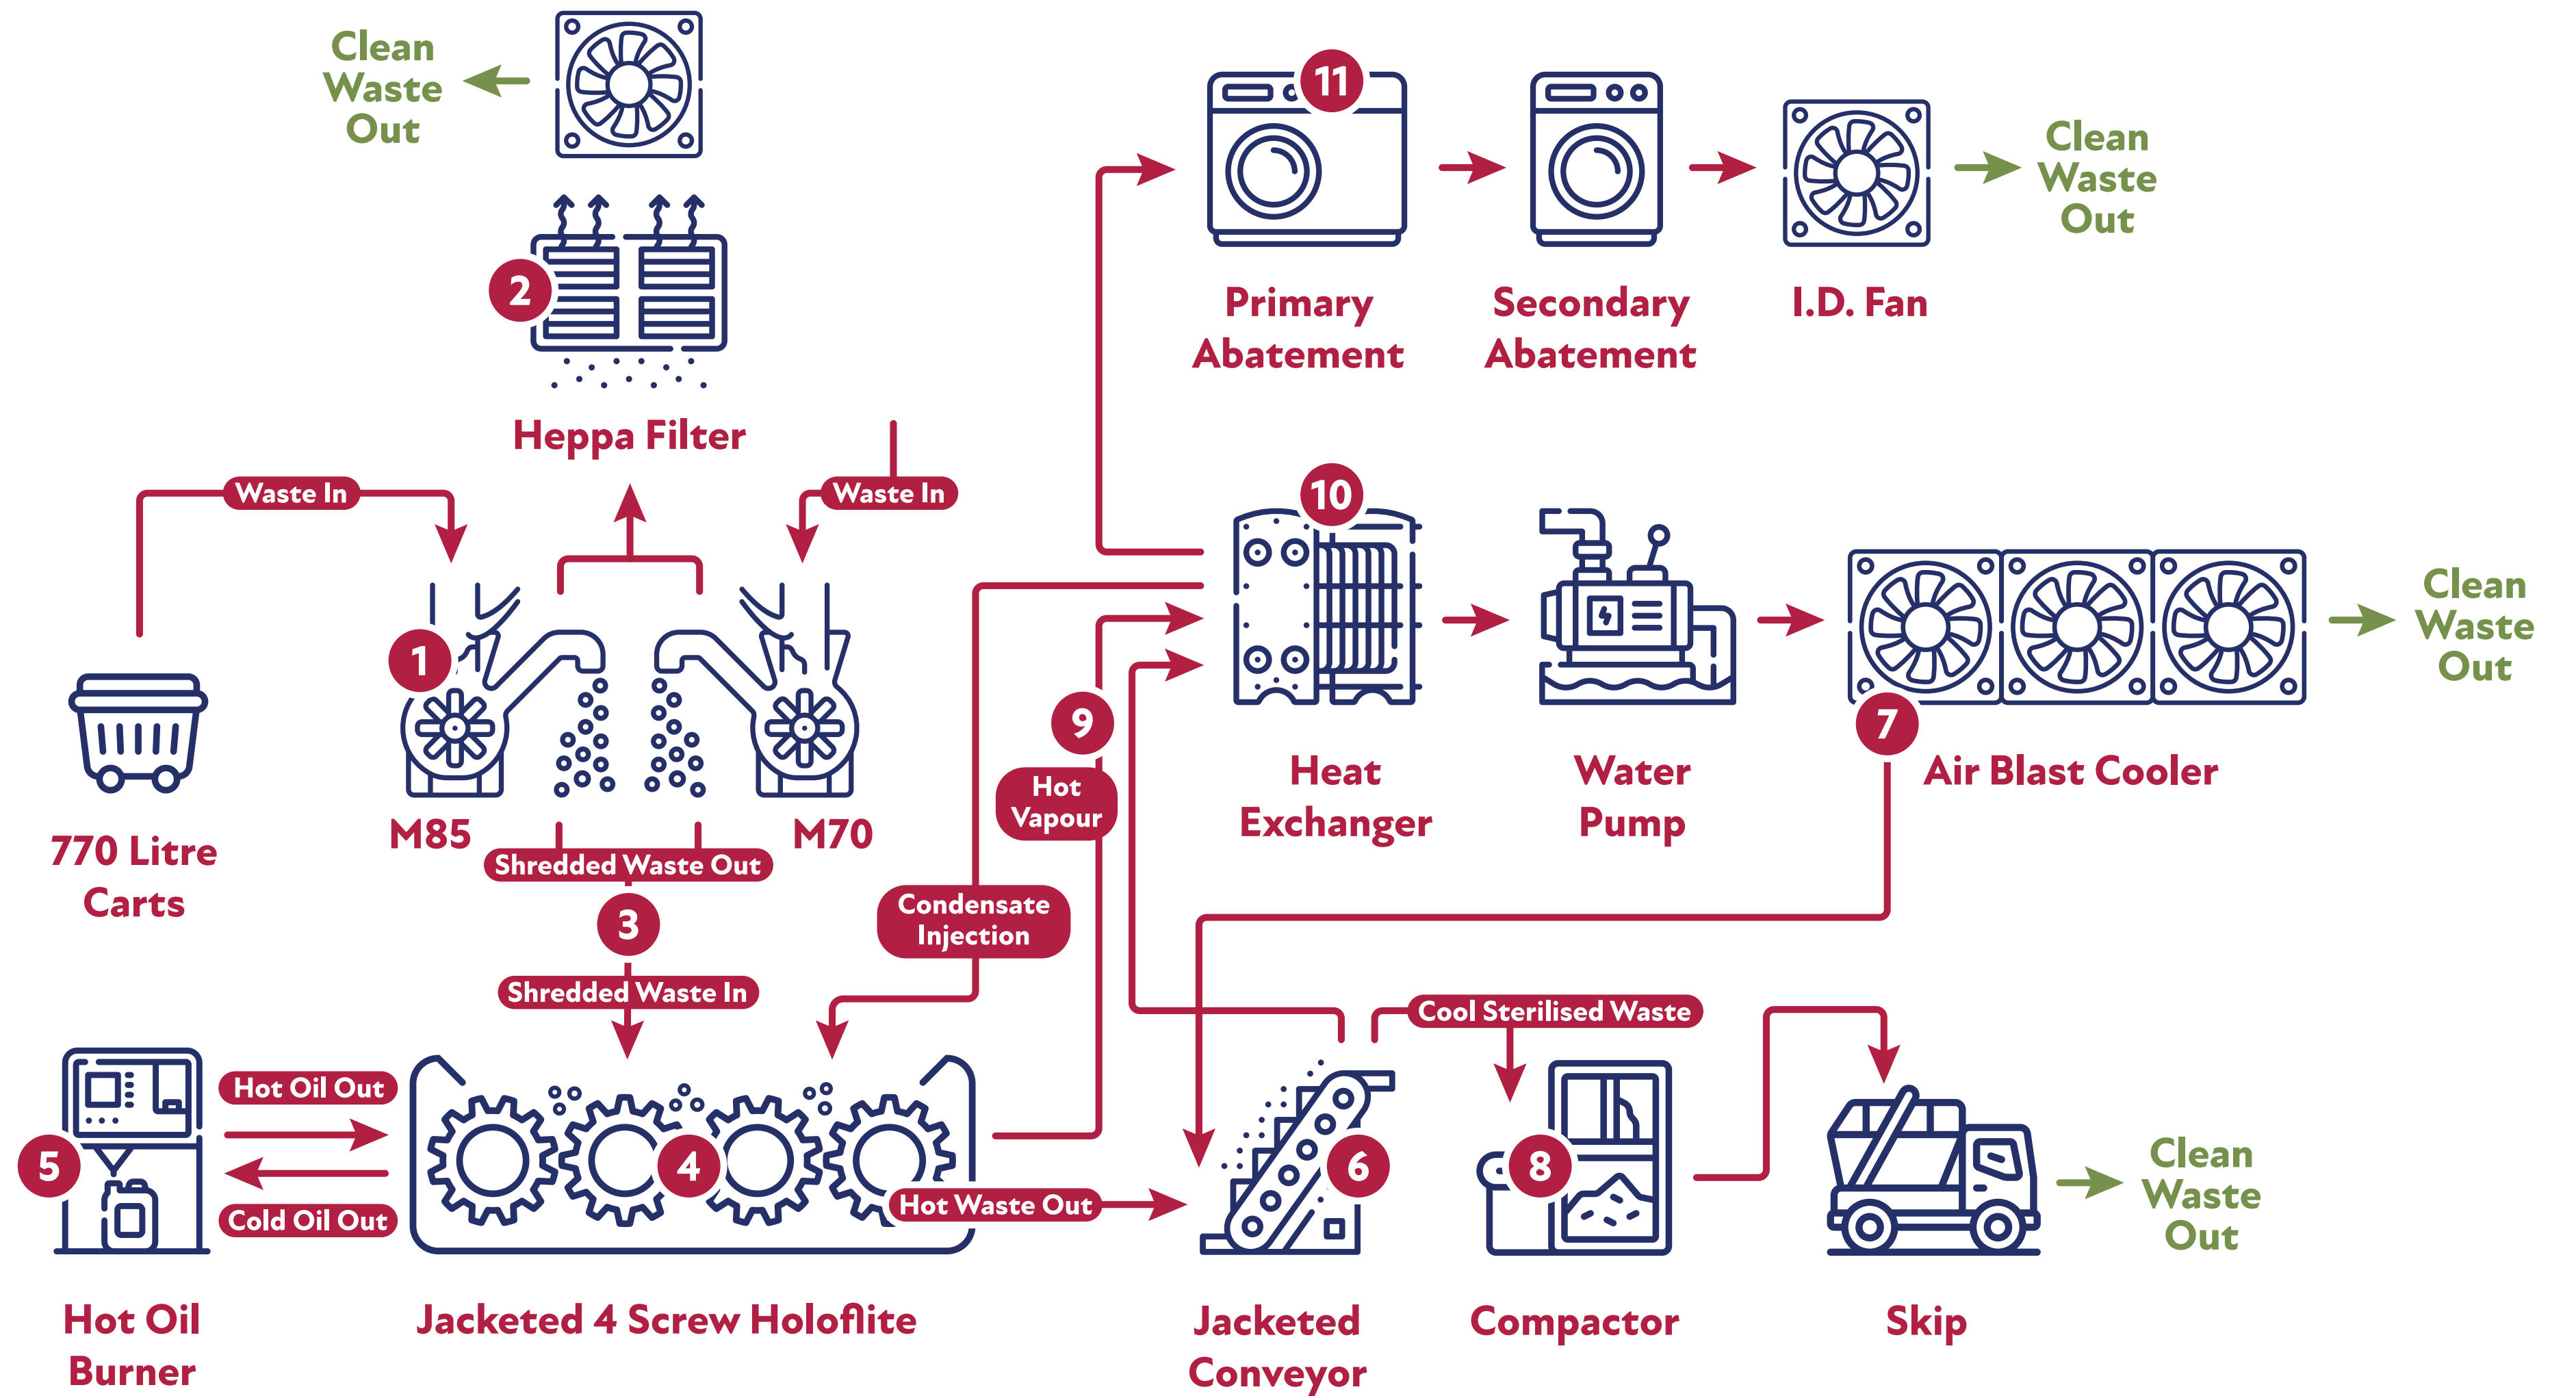

Paper is sorted into grades and sent to paper mills to create new paper products such as newspapers.

Card is baled to be sold for new cardboard manufacture.

Offensive Waste

Alternative treatment (AT) is the heating of waste to disinfect it, as an alternative to incineration or landfill. The resulting shredded and disinfected waste is compacted, baled and used as an alternative fuel source/solid recovered fuel (SRF). SRF fuel is used as an alternative to coal or Petcoke within cement kilns.

Sustainable Products

At Hygienic Concepts, we prioritize sustainability. From formulation to packaging and delivery, we carefully consider every aspect of our products' environmental impact. Our products are eco-friendly, safe, and use recyclable and biodegradable materials. We also engage in ethical business practices, including responsible sourcing and fair trade policies.

Live Life & flourish
PROFESSIONAL
A green planet is a clean planet

Sustainably Aware Hygiene 

Product sustainable points to consider:

Reduces CO2e by up to 85%.

Local UK Production and supply chain reduces CO2e impact from transport.

Technologies are renewable and sustainable, sourced from plant extracts, fermentation, microbes and manufacturing by-products reducing CO2e and environmental toxicity.

Post Consumer Recycled bottles provide a circular life cycle reducing CO2e and removing physical plastic pollution.

Readily biodegradable (99% over <28 days).

0% manufacturing waste.

Not tested on animals.

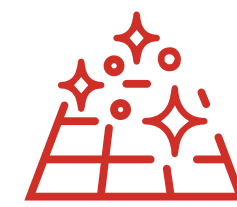

Excludes all 'watch list' raw materials.

Uri-bug™ Biological Washroom Cleaner

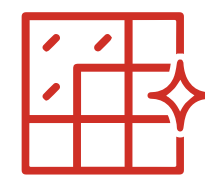

Product Description

Uri-bug Universal Biological Washroom Cleaner utilises specific microbes and co surfactants for cleaning and deodorising urinals, toilets and all washroom areas.

Areas of use:

Floors

Walls

Sinks

Toilets

Urinals

Live Life flourish PROFESSIONAL

Universal Biological Washroom Cleaner

- Eco-friendly
- Biodegradable
- Menthol Fragrance
- Suitable for all washroom surfaces
- Works in perfect harmony with the Uri-Bug™ Urinal System

AREAS OF USE:

5 Litre

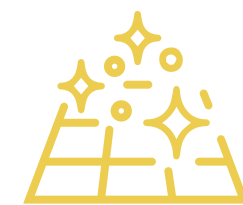

All Surface Sanitiser

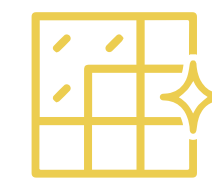

Product Description

Uri-bug Universal Biological Washroom Cleaner utilises specific microbes and co surfactants for cleaning and deodorising urinals, toilets and all washroom areas.

Areas of use:

Floors

Walls

Windows

Mirrors

Tables

Bannisters
